Connect DVR SDI Server (1st Gen) Quick Start Guide Connect DVR 4.8 SDI Server 1

The Haivision Connect DVR multi-site solution enables you to stream time-shifted video from an originating site to remote venues. An integral part of the multi-site solution, the Display Engine SDI server can accommodate synchronized dual-stream playout, preserving the large-scale theatrical experience (IMAG) from the main site to the remote venue with perfect synchronization.

This quick start guide includes the basic steps required to install and connect to your CDVR SDI server.

For more detailed information, please refer to the *Important Notice* document (shipped with the server or available on the Haivision Support Portal at https://support.haivision.com) and the *User's Guide* (available at https://doc.haivision.com).

Safety Guidelines

Use the following guidelines when unsafe conditions exist or when potentially hazardous voltages are present:

- Always use caution and common sense.
- To reduce the risk of electrical shock, do not operate equipment with the cover removed.
- Repairs must be performed by qualified service personnel only.

Improper handling and/or installation practices of sensitive equipment may VOID the warranty.

🔶 Caution

When handling components, or when setting switch options, always use an antistatic wrist strap connected to a grounded equipment frame or chassis. *If a wrist strap is not available, periodically touch an unpainted metal surface on the equipment.* Never use a conductive tool, such as a screwdriver or a paper clip, to set switches.

Connecting the Connect DVR Appliance

To connect the server:

- 1. Open the box, verify the contents, and visually inspect the items for any shipping damage. If necessary, contact Haivision for return instructions.
- 2. Unpack the box and position the hardware on a stable work surface. Optionally, mount the device in a server rack.

Caution

When mounting in a server rack, refer to your rack vendor's documentation as well as the included rack mount instructions in the rail kit provided with your system. Improper rack mounting could cause serious harm to equipment and/or people near the rack. Please be sure to properly and securely mount your hardware.

Ensure that the final location has proper airflow. Do not block or impede airflow to the vents.

- 3. On the device:
 - Connect to your network using an Ethernet cable. For most configurations, use the port labeled Gb1 or NICO.
 - For initial setup purposes, attach a mouse, keyboard, and monitor to the available USB and VGA ports.
 - If necessary, connect any cables to the available I/O ports as shown in the following diagram(s).
 - Attach the power cord to the power receptacle.
- 4. On the front of the device, press the 0 button to power it on. The power LED lights.

) Note

The SDI inputs are not used on the Connect DVR DE-SDI appliance.

Changing Network Settings

During initial setup you may want to change some network settings such as servers, etc.

The Network Configuration settings allow you to specify the server hostname, DNS servers, NTP server, search domains, and the default interface. You can also configure advanced settings, such as static routes.

To configure the network:

- 1. Click the \equiv icon and select Administration.
- 2. Click **System Settings** in the admin toolbar, and click **Network** in the sidebar.

HAIVISION

3. Fill in the fields as appropriate. See the table below for more information.

Haivision Connect DVF	R		Welcome Adminis	trator (Sign Out) 🛛 🗮

4. To add a Static Route, see Adding a Static Route.

5. Click Save Settings.

6. Click **Reboot** to have your network configuration changes take effect.

The following table lists the configurable network settings.

Setting	Description	
General		
Hostname	The hostname to be assigned to the device. Specify the hostname as	
	a FQDN, for example: myserver.mycompany.com	
Default Interface	The default Ethernet interface is the first one.	
DNS Servers	<i>(Optional)</i> The Internet Protocol version 4 (IPv4) addresses of the Domain Name Servers to use. If possible, we recommend using Google's public DNS servers (8.8.8.8 and 8.8.4.4).	
	Important	
	If you want the DNS Servers values populated by a DHCP server, you should delete any entries in these fields <i>before</i> clicking the Saved Settings button.	
Search Domains	<i>(Optional)</i> The search strings to use when attempting to resolve domain names.	
	1 Important	
	If you want the Search Domains values populated by a DHCP server, you should delete any entries in these fields <i>before</i> clicking the Saved Settings button.	
NTP Server	(Optional) If the Network Time Protocol (NTP) is enabled, enter	
	the address of the NTP server. For example, www.pool.ntp.org	
	Important To accurately schedule, record, and play streams, use www.pool.ntp.org to synchronize the system clocks on the KB Encoder, Display Engine appliance, and the remote Mac/PC used to access the KB and Connect DVR user interfaces. This ensures that all of your peripherals match the Haivision Cloud DVR clock.	
SNMP	Enable/Disable Simple Network Management Protocol (SNMP).	
Read-Only Community	SNMP string to be used when making read-only information requests.	
SNMP Trap Servers	IPv4 or FQDN of a server to send SNMP traps to.	
Interface		
<interface_name></interface_name>	Note Network interface names vary depending on system configuration, such as enp3s0/enp4s0.	
Addressing	 Choose whether the interface uses a static or dynamic IP address: None — Select to disable the interface. Static — Select to disable DHCP. When DHCP is disabled, you must manually enter the IP address, DNS server, subnet mask, and gateway. DHCP — Select to enable DHCP. When DHCP is enabled, the device receives an IP address from a DHCP server on the network. The DNS server, subnet mask, and gateway are also populated by the DHCP server. 	

Setting	Description	
IP Address*	Note If DHCP is disabled, you may enter an IP address in dotted-decimal format (e.g., 127.0.0.1).	
Subnet Mask*	Note If DHCP is disabled, you may enter the Network Mask in dotted- decimal format (e.g., 255.255.0.0).	
Gateway*	Note If DHCP is disabled, you may enter the gateway address in dotted- decimal format (e.g., 192.168.0.1).	
MTU	Maximum Transmission Unit. Specifies the maximum allowed size of IP packets for the outgoing data stream. Valid values are 228 to 1500.	
MAC Address	(Read-only) The MAC address assigned to the interface. This is the physical address of the network interface and cannot be changed.	
Link	Select the link negotiation settings for the interface, either Auto or Manual. If you select Manual, you can select the Speed and Duplex settings as described below.	
Speed	If manual is chosen in the link negotiation settings, select the Ethernet speed (in Mbps): 10, 100, or 1000.	
Duplex	If manual is chosen in the link negotiation settings, select the duplex mode: full or half.	
Static Routes		
Destination	Each static route requires a destination.	
Subnet Mask	1 Note A static route cannot be created with a subnet mask of either 0.0.0.0 or 255.255.255.	
Gateway	See above definition.	
Interface	The interface associated with the static route. Use the drop-down menu to make your selection.	

• These values are automatically populated.

Accessing the Connect DVR Web Interface

To access the device's Web interface:

- 1. On another computer connected to the same network, open a Web browser.
- 2. Enter the device's assigned IP address. For example, if the IP Address is 10.5.1.4, enter a URL of https://10.5.1.4.
- 3. When a browser accesses the website, it requests a security certificate to confirm that the site is trusted.

The device ships with a self-signed SSL certificate key set which works with any configured server hostname. However, Web browsers do not consider self-signed certificates to be trusted, because they are not signed by a Certificate Authority. Consequently, when accessing the website with a

HAIVISION

self-signed certificate, users see a security warning and are prompted for authorization as shown below. Responses may vary depending upon the browser used.

(i) Important

Before proceeding or adding an exception for the site, check with your administrator on the correct response.

4. Sign in using one of the credentials provided on the *Important Notice* included with your device.

The web interface opens to the Production Center screen.

For step-by-step information on using the web interface, refer to the Connect DVR User's Guide.

Connecting to the Console UI Remotely with the SDI

Important

By default, you will usually access configuration settings from the Web UI. Accessing via the Console UI requires administrator privileges and password.

Connecting to the Console UI remotely requires a Secure Shell (SSH) client and the IP address of the device. If you'd prefer to connect to the Console UI directly, you will need a monitor, a USB keyboard, and possibly a mouse to connect to the device.

To access the Console UI using a secure shell:

- 1. Initiate a secure shell (SSH) connection to the IP address of the device using an SSH client (for example, PuTTY).
- 2. When prompted, sign in using the hvroot username and password. Refer to the *Important Notice* document that accompanied your device for the default hvroot password.

See Using the Console UI for details on the various tasks you can perform with the Console UI.

HAIVISION

Waste Electrical and Electronic Equipment (WEEE) Disposal

In accordance with the European Union (EU) WEEE Directive, Haivision products that fall within the scope of the WEEE, are labeled with the above symbol, and customers are encouraged to responsibly recycle their equipment at the time of disposal. Haivision also offers its customers the option of returning Haivision equipment to facilitate its environmentally sound disposal.
