## FROM PANEL UI

Tap **NETWORK** settings on home panel

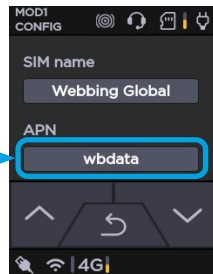

Tap on the modem to be configured

Configure both **APN** & **Settings**

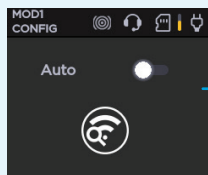

Set **APN** (Access Point Name)

«White» SIM cards from Haivision = **wbdata**

We highly recommend that you select several operators for your device in order to spread the stream over several networks, thereby avoiding the risk of using a single network already overloaded.
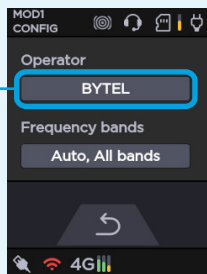

Each modem/SIM can be configured in one of 3 modes:

|	
Automatic	✓ Panel UI ✓ Web UI The operator is automatically selected in the field. All SIM cards may lock on the same operator
Scan & Select	✓ Panel UI ✓ Web UI The user scans the network in the field & selects the expected operator among detected networks
Manual	✗ Panel UI ✓ Web UI The user forces the operator (prior to field presence) with codes identifying the country (Mobile Country Code) & the operator (Mobile Network Code)

• Enabling Auto Mode

Tap to toggle **Auto** configuration ON **Auto ON** assigns operator automatically

• Enabling Scan & Select Mode

Tap to toggle **Auto** configuration OFF. **Auto OFF** starts scan of available networks
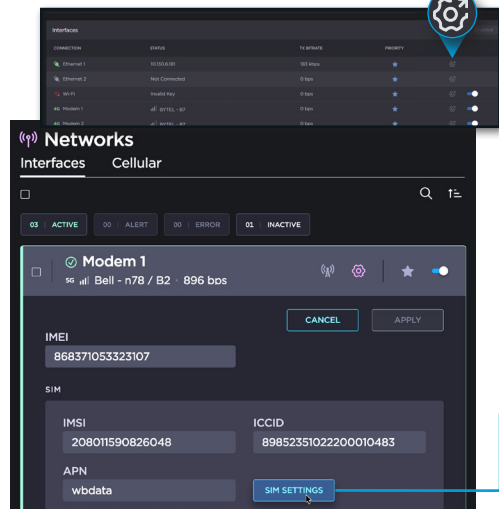

Scan may take up to several minutes

Tap to assign operator to SIM card

FROM WEB UI

1 From the **Networks** page, click the settings button for the modem to be configured

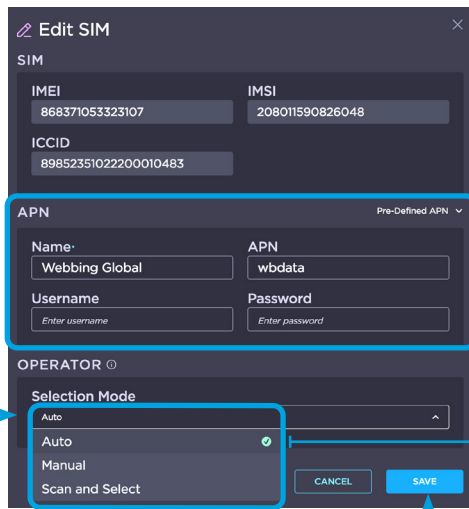

2 Select **SIM SETTINGS**

Scan for country & network codes

Mobile Country Code (MCC)
Example: France 208

Mobile Network Code (MNC)
Example: Orange 01
Bouygues Telecom 20

We highly recommend that you select several operators for your device in order to spread the stream over several networks, thereby avoiding the risk of using a single network already overloaded.
