

Amazon AWS Quick Start Guide

Haivision Media Gateway 1.6 on Amazon AWS

This quick start guide describes how to create and configure a virtual Media Gateway server on Amazon Web Service (AWS). For more detailed information, please refer to the *Important Notice*, [Media Gateway Quick Start Guide](#), and the [Media Gateway Administrator's Guide](#).

About Amazon AWS

Amazon AWS is a collection of remote computing services that make up a cloud computing platform for building, deploying and managing applications and services through a network of datacenters across several geographical regions. Amazon AWS allows you to deploy and manage your Haivision Media Gateway instance(s) in this global network. For more information, please visit:

<https://aws.amazon.com>

About Media Gateway

The Haivision Media Gateway serves as a bridge between video infrastructures, and is used to distribute live video to multiple sites, or to aggregate live video from multiple remote locations. Powered by Haivision's SRT (Secure Reliable Transport) technology, the Haivision Media Gateway is ideal for transporting high-quality, secure live video across public and private networks. For more information, please visit:

<https://haivision.com/products/haivision-media-gateway>

Before You Start

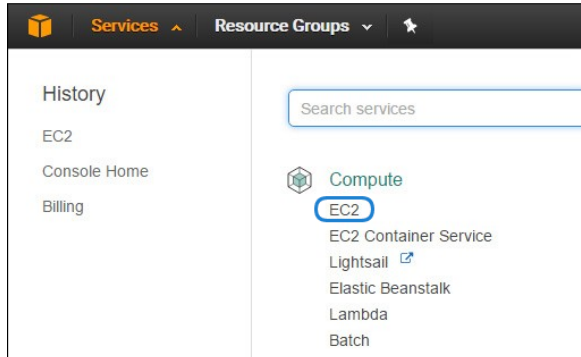

You must have an active Amazon AWS account to sign in to the AWS management portal. For evaluation purposes you can subscribe to AWS for a 12-month trial period. For more information, please visit: <https://aws.amazon.com>

With Amazon AWS, you can choose from different licensing options for Media Gateway. You may "bring your own license" (BYOL) or "pay as you go" (PAYG). For BYOL, please contact your Haivision representative to discuss your options and to obtain a license. See [Licensing Your Server](#) for details.

Creating a Virtual Media Gateway Server

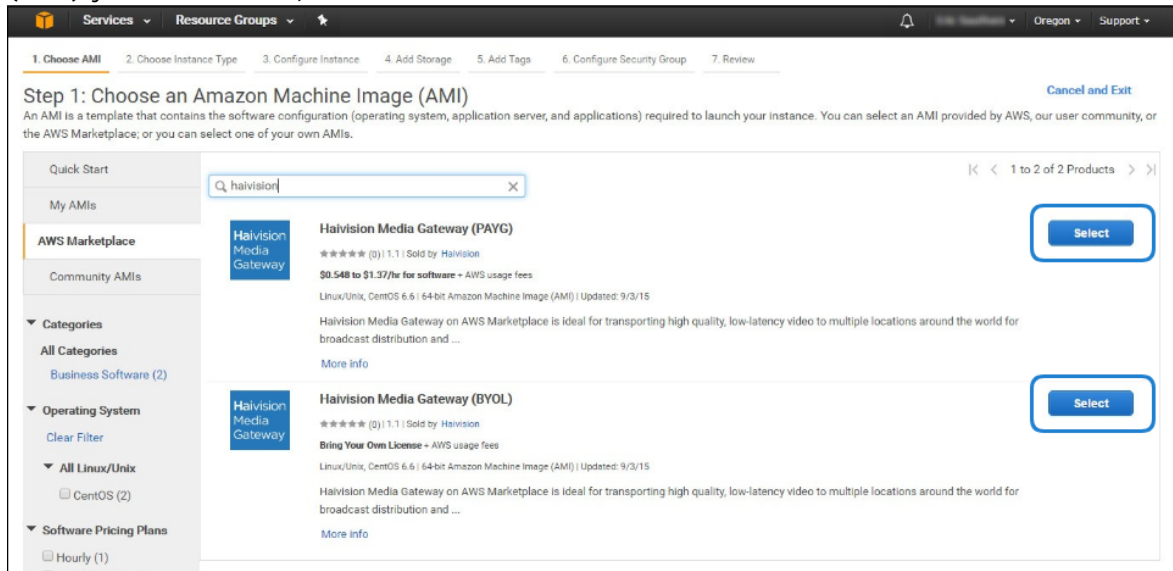

Signing in to AWS

1. Sign in to your AWS account: <https://console.aws.amazon.com>
2. After you have successfully logged in to the AWS portal, click **Services > EC2**.

Creating a Virtual Instance

1. On the EC2 Dashboard, click **Launch Instance**.
2. Click **AWS Marketplace**.
3. Type "Haivision" in the search box and press **Enter** to find the Media Gateway image.
4. Click the **Select** button corresponding to the version of the Media Gateway Amazon Machine Image (AMI) you wish to use, PAYG or BYOL.

5. Review the product and pricing details, and then click **Continue**.
6. Choose an Instance Type, and then click **Next: Configure Instance Details**:

Step 2: Choose an Instance Type
 Amazon EC2 provides a wide selection of instance types optimized to fit different use cases. Instances are virtual servers that can run applications. They have varying combinations of CPU, memory, storage, and networking capacity, and give you the flexibility to choose the appropriate mix of resources for your applications. Learn more about instance types and how they can meet your computing needs.

Filter by: All Instance types | Current generation | Show/Hide Columns

Currently selected: m4.xlarge (13 ECUs, 4 vCPUs, 2.4 GHz, Intel Xeon E5-2676v3, 16 GiB memory, EBS only)

Note: The vendor recommends using a m3.xlarge instance (or larger) for the best experience with this product.

	Family	Type	vCPUs	Memory (GiB)	Instance Storage (GiB)	EBS-Optimized Available	Network Performance
<input type="checkbox"/>	General purpose	t2.nano	1	0.5	EBS only	-	Low to Moderate
<input type="checkbox"/>	General purpose	t2.micro <small>Free tier eligible</small>	1	1	EBS only	-	Low to Moderate
<input type="checkbox"/>	General purpose	t2.small	1	2	EBS only	-	Low to Moderate
<input type="checkbox"/>	General purpose	t2.medium	2	4	EBS only	-	Low to Moderate
<input type="checkbox"/>	General purpose	t2.large	2	8	EBS only	-	Low to Moderate
<input checked="" type="checkbox"/>	General purpose	t2.xlarge	4	16	EBS only	-	Moderate
<input checked="" type="checkbox"/>	General purpose	t2.2xlarge	8	32	EBS only	-	Moderate
<input type="checkbox"/>	General purpose	m4.large	2	8	EBS only	Yes	Moderate
<input checked="" type="checkbox"/>	General purpose	m4.xlarge	4	16	EBS only	Yes	High
<input type="checkbox"/>	General purpose	m4.2xlarge	8	32	EBS only	Yes	High
<input type="checkbox"/>	General purpose	m4.4xlarge	16	64	EBS only	Yes	High
<input checked="" type="checkbox"/>	General purpose	m4.10xlarge	40	160	EBS only	Yes	10 Gigabit

Buttons: Cancel | Previous | Review and Launch | Next: Configure Instance Details

Note

We do not recommend using tiers with low CPU resources, because the resulting performance of Media Gateway will be inadequate.

Important

For high bandwidth streams or critical viewing requirements, we recommend using c4.xlarge or c4.2xlarge tiers, as they are optimized for compute-intensive workloads and have high-performance network I/O.

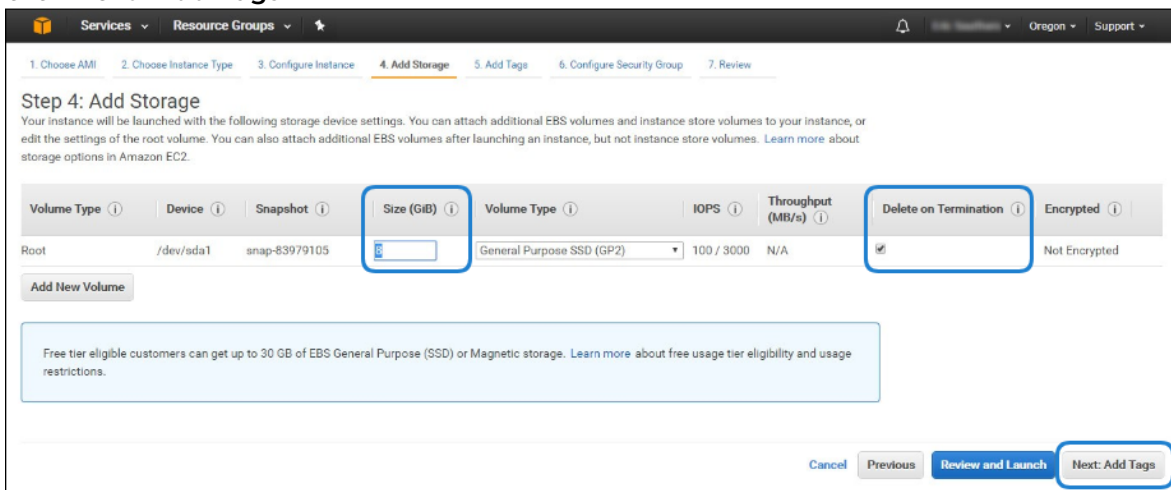

7. Modify your Instance Details as needed, and then click **Next: Add Storage:**

Note

You may wish to choose Enable under Auto-assign Public IP to give your Media Gateway server an IP address reachable from any location.

- Set the amount of storage space you wish to make available to the Media Gateway server, and then click **Next: Add Tags**:

Note

The default storage is sufficient for most Media Gateway operations. However, if you intend to use Media Gateway in conjunction with a video server (such as Haivision Video Platform), having additional storage allows you to benefit from local caching on the virtual Media Gateway server.

Note

You may wish to choose Delete on Termination to have the storage space automatically removed if you cancel your subscription for the server instance.

9. Apply one or more tags (such as a Name) to the Media Gateway server, and then click **Next: Configure Security Group**:

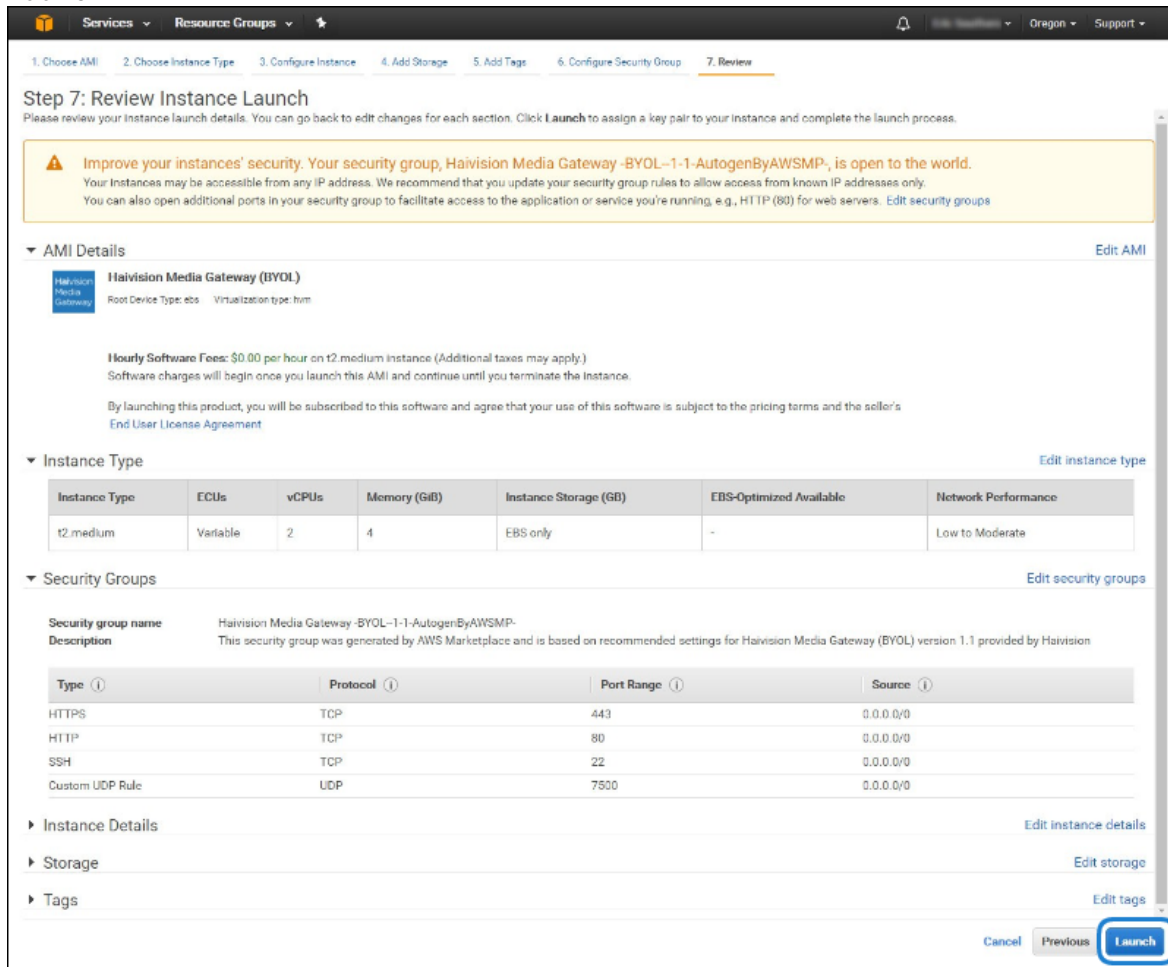

10. Create a new security group, or select from a list of existing groups. Make sure you have the following ports open:

- Port 443 for HTTPS access to the Media Gateway web interface
- Port 22 for SSH access to the Media Gateway Console UI interface
- A custom port to allow incoming UDP traffic, such as SRT streams (use Custom UDP Rule). See [SRT](#) for more information.

11. Click **Review and Launch**.

- Review your settings, and make any necessary corrections or changes. When you are satisfied, click **Launch**:

- When prompted, select or create a public/private RSA key pair that is used to authenticate SSH sessions, and then click **Launch Instances**:

Note

SSH access to the Console UI is only allowed via SSH public key.

- In a few moments, a Launch Status page appears, informing you that your Media Gateway instance is in the process of launching. Creating your server instance can take up to several minutes. At any time, click **View Instances** to see more details:

- After the Instance State changes to "running", reboot the virtual server by selecting it in the AWS View Instances page and clicking **Actions > Instance State > Reboot**.

- Confirm rebooting in the confirmation dialog box.

- Return to the AWS View Instances page. In the row corresponding to your Media Gateway, take note of the Public IP address and Instance ID assigned by AWS to your Media Gateway instance. The Instance ID is the default password for signing into Media Gateway web interface.

Name	Instance ID	Instance Type	Availability Zone	Instance State	Status	Alarm St.	Public DNS	Public IP	Key Na
Media Gateway Demo	i-0823bba7b2dfc7a11	t2.medium	us-west-2c	running	2/2...	None		54.93.192.101	MG AV

At this point, your virtual Media Gateway server is up and running!

- If you have created a BYOL instance, before continuing you need to license your Media Gateway. See [Licensing Your Server](#).
- If you have created a PAYG instance, you are ready to sign in and begin using your Media Gateway. See [Signing in to Media Gateway](#).

Signing in to Media Gateway

Accessing the Web Interface

1. Open a web browser, and enter the public IP Address of the virtual Media Gateway server. See Step #17 in [Creating a Virtual Media Gateway Server](#) to find the assigned IP address. A message may appear warning that the connection to the Media Gateway server is untrusted. This is normal, and you can safely continue.
2. Sign in to the Media Gateway Web Interface, using the haiadmin username and password. (By default, the password is the Instance ID of the virtual server. See Step #17 in [Creating a Virtual Media Gateway Server](#).)

3. Click the **Sign In** button. The Browse Routes screen appears.

For more details, refer to "Accessing Media Gateway" in the *Media Gateway Administrator's Guide*.

Accessing the Console UI

Note

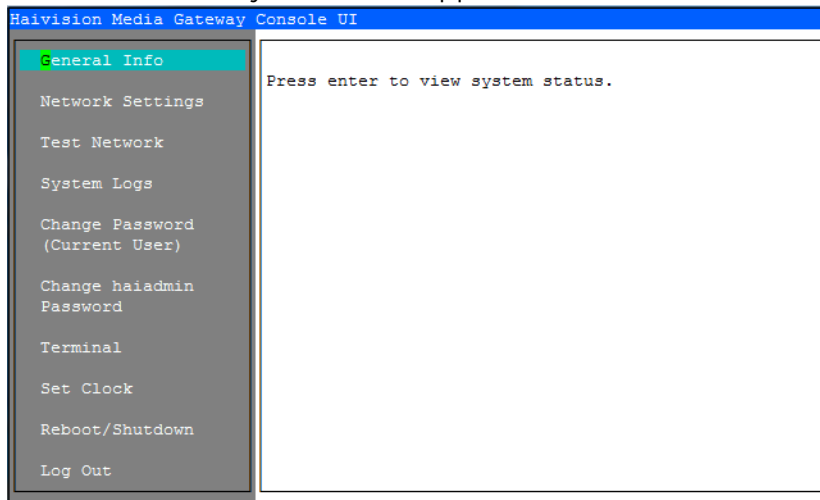

You must have the private RSA key corresponding to the public key with which the virtual Media Gateway server was configured. See Step #13 in [Creating a Virtual Media Gateway Server](#).

1. In a terminal window, enter the following command:

```
ssh -i ~/.ssh/<public-key_rsa> hvroot@<public-ip-address>
```

For instructions on specifying a public key on PuTTY for Windows, see the AWS documentation at: <http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/putty.html>.

The Media Gateway Console UI appears:

2. In the navigation sidebar, use the ↑↓ (up and down arrow) keys to highlight menu items, and then press the **Enter** key.

3. **! Important**

Network configuration settings are controlled by Amazon AWS. Do not change them using the Haivision Console UI.

4. Press the **Enter** key to save your changes and return to the main screen.

5. Select Log Out and then press the **Enter** key to exit the Console UI.

For more details, refer to "Using the Console UI" in the *Media Gateway Administrator's Guide*.

Licensing Your Server

For **BYOL** instances, before creating routes in your virtual Media Gateway server, you must obtain a license from Haivision via your sales representative.

i Note

Without a valid license key, you can sign in, but you cannot create or edit routes.

To obtain a license:

1. Sign into the Media Gateway as described in [Signing in to Media Gateway](#).
2. Click the **☰** icon and click **Administration**.
3. Click **Network**.
4. Copy the server's MAC Address.

5. **Note**
 The license you receive is bound only to the Media Gateway instance corresponding to the MAC address you submit.

- After you receive your license, sign back in to the Media Gateway server. You should be prompted with a License Required message. (Otherwise, click the  icon, click **Administration**, and click **Licensing**). Click **Add License**.
- Copy and paste the license for your server into the License field.

8. Click **Add**.

Your virtual Media Gateway server is now licensed and available. For more information on licensing, please refer to the *Media Gateway Administrator's Guide*.

SRT

Your virtual Media Gateway server can be used to receive and redistribute SRT streams. You must first verify that the Security Group is set to your network configuration, and you must open a UDP port for your network if you want to use SRT Listener mode. This was completed in Step #10 in [Creating a Virtual Media Gateway Server](#) when setting up your AWS resource.

Note
 For more information on SRT, please refer to the *Media Gateway Administrator's Guide* and the *SRT Deployment Guide*, available from the [Haivision Support Portal](#).

Stopping the Instance

! Important

Please be aware that simply *shutting down* your Media Gateway server via the Console UI does not deallocate your instance, and you will continue to be charged for the running instance. To avoid unwanted charges, you must stop the AWS virtual machine.

To stop your Media Gateway server instance:

1. Navigate to the AWS View Instances page.
2. Find and select your server, then click **Actions > Instance State > Stop**.

! Important

It is possible that shutting down an AMI instance results in a change in the MAC address the next time it is started, which causes the existing BYOL license to expire. If this happens, contact Haivision with the new MAC address to obtain a replacement license.

Obtaining Documentation

This document was generated from the Haivision InfoCenter. To ensure you are reading the most up-to-date version of this content, access the documentation online at <https://doc.haivision.com>. You may generate a PDF at any time of the current content. See the footer of the page for the date it was generated.
